

The world's most powerful **brand, quality, and safety** auditing system

The RizePoint Mobile Auditor® app and the cloud-based RizePoint Management Console team up to give you a single view into your compliance data. With this powerful brand, quality, and safety auditing system in your corner, you'll gather better data, see issues earlier, and act to resolve those issues faster— before they affect your customers' experiences.

Gather Better

See Earlier

Act Faster

Mobile Auditor®

Mobile app for remote site inspections

Mobile Auditor enables efficient and thorough assessment of remote locations through feature-rich online or offline capability

Business Intelligence

Turn audit results into a reporting powerhouse

Quickly sync audit information to provide dynamic visual reporting and dashboards for key analysis using base management dashboards or search-driven analytics (coming in 2017)

Corrective Action Management

Act quickly to correct issues before they become costly liabilities

Use rules to trigger action plan tasks, establish due dates, send notifications, create alerts, issue reminders, and monitor task completion.

Audit Form Creation

Ensure all aspects of inspections are covered with effective, customized forms

Use the RizePoint Management Console to build customized forms that can easily be maintained and pushed out to the Mobile Auditor app.

Management Console Interface

Easily display info users need most

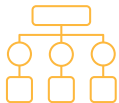

Dynamic user interface with quick, at-a-glance visibility into recent audit results, Corrective Action items due, administrative messages, internal news, and RSS feeds.

Audit Scheduling

Schedule audits with ease

Create and view audit schedules with ease in the cloud-based RizePoint Management Console.

Automated Communication Tools

Provide complete visibility throughout the entire organization

Standardized templates, email alerts, push-notifications, and report communications make it easy to manage, monitor, and communicate compliance progress.

Thermocouple Integration

Streamline temperature and line checks

Conduct temperature checks and automate your line check process with thermocouple device integration in Mobile Auditor.

Security

Protect audit results

Encryption, single sign-on functionality using network logins, and individual access rights protect your data at every stage.

API Framework

Sync your data with audit results

Sync master data from your system of record with RizePoint whenever you have updates.
